Expected use by alfalfa for this week is 1.9 inches.

In past week, actively growing lawns used 1.7 inches.
Expected use by actively growing lawns for this week is 1.9 inches.

In the past week average ET gage readings were 1.8 inches.
The average rainfall for the district was 0.53 inches.

The weather forecast for the next week shows highs being in the high 80's and low 90's and lows in the 60's. There is a chance of scattered thunderstorms throughout the week. In the last week soil moisture monitoring station 1 showed 68% water available at 12", 55% water available at 24", and 78% water available at 36". The producer did irrigate. Remember this is in a Sandy Loam soil type with Corn planted and will vary depending on site specific; weather, irrigation management, topography, management practices, crop, and soil type.

In the last week soil moisture monitoring station 2 showed 57% water available at 12" and 62% water available at 24". The producer did irrigate. Remember this is in a Loam soil type with Dry Beans planted and will vary depending on site specific; weather, irrigation management, topography, management practices, crop, and soil type. The crop water use report is completed using the average growth stage for each crop and ET gage reading from across the district. To find the conversion your specific crop growth stage visit <https://nawmn.unl.edu/GrowthStageData>
