(Regional)-Red Cross Tips To Stay Safe This Summer As Temperatures Rise

By: Roxie Graham-Marski Posted at: 07/12/2013 11:19 AM

(NORTH PLATTE)-Summer is here, bringing with it dangerously excessive heat. The American Red Cross has steps people can follow to stay safe as the temperatures soar.

Regional CEO Tina Labellarte says, "Excessive heat can be deadly; it has caused more deaths in recent years than all other weather events. We want everyone to stay safe during the hot weather."

Here are some reminders to follow when the weather is hot and humid:

- Never leave children or pets in the car, as the inside temperature of a car can quickly reach 120 degrees.
- Stay hydrated by drinking plenty of fluids. Avoid drinks with caffeine or alcohol.
- Avoid extreme temperature changes.
- Wear loose-fitting, lightweight, light-colored clothing. Avoid dark colors, because they absorb the sun's rays.
- Slow down, stay indoors and avoid strenuous exercise during the hottest part of the day.
- Postpone outdoor games and activities.
- Use a buddy system when working in excessive heat. Take frequent breaks if working outdoors.
- Check on family, friends and neighbors who do not have air conditioning, who spend much of their time alone or who are more likely to be affected by the heat.
- Check on animals frequently to ensure that they are not suffering from the heat. Make sure they have plenty of cool water.
- If someone doesn't have air conditioning, they should choose places to go to for relief from the heat during the warmest part of the day (schools, libraries, theaters, malls).

Heat Exhaustion

Excessive heat can lead to sunburn, heat cramps, heat exhaustion and heat stroke. If someone is experiencing heat cramps in the legs or abdomen, get them to a cooler place, have them rest, lightly stretch the affected muscle, and replenish their fluids with a half a glass (about four ounces) of cool water every 15 minutes.

If someone is exhibiting signs of heat exhaustion (cool, moist, pale or flushed skin, heavy sweating, headache, nausea, dizziness, weakness exhaustion), move them to a cooler place, remove or loosen tight clothing and spray the person with water or apply cool, wet cloths or towels to the skin. Fan the person. If they are conscious, give small amounts of cool water to drink. Make sure the person drinks slowly. Watch for changes in condition. If the person refuses water, vomits or begins to lose consciousness, call 911 or your local emergency number.

Heat Stroke can be life-threatening. Signs include hot, red skin that may be dry or moist, changes in

consciousness, vomiting and high body temperature. Call 911 immediately if someone shows signs of heat stroke. Move the person to a cooler place. Quickly cool the person's body by immersing them up to their neck in cold water if possible. Otherwise, douse or spray the person with cold water, or cover the person with cold, wet towels or bags of ice.

For more information on what to do when temperatures rise, visit www.redcross.org, download the [Red Cross Heat Wave Safety Checklist](#), or download the free Red Cross First Aid. The app is available for iPhone and Android smart phone and tablet users in the Apple App Store and the Google Play Store for Android by searching for American Red Cross. People can learn how to treat heat-related and other emergencies by taking First Aid and CPR/AED training online or in person. Visit www.redcross.org/takeaclass for information and to register.
